
Gesture Deck

Present without touching the keyboard.

Click Enable camera (bottom right), then try the gestures on the next slides.

Reach to change slides

1. Show your palm to the camera, fingers up, near the middle.
2. Hold still until the dot in the camera preview turns blue.
3. Reach right for the next slide, left for the previous one.
4. Come back to the middle and reach again. There is no need to lower your hand between slides.

Point to highlight

Point with your index finger and a glowing laser follows it.

The dashed box in the camera preview maps to the whole slide, so you never have to reach the edge of the camera's view.

Lower your finger and the pointer fades away.

The keyboard still works

Left / Right arrows, Space, Page Up / Page Down : previous / next

Home / End : first / last slide

F : fullscreen ? : the gesture guide

Tips for reliable tracking

Face a window or lamp. Avoid a bright light behind you.

Keep your whole hand inside the camera picture.

Everyday hand movements rarely flip slides: reaching only works after you deliberately show your palm and hold it still, and it switches itself off after a few seconds without a reach.

Ready to present?

Move the mouse to reveal the top bar, then use the file icon at the top left to load your own PDF or images.

Press ? at any time for the gesture guide.
